DETAILED ACTION

Response to Election/Restrictions

Applicant's election of Group I with partial traverse of where Applicants suggest Group II should be examined also, in the reply filed on 03/03/09 is acknowledged. The traversal is on the ground(s) that a search of Group I will logically encompass the feed of claim 7. This is not found persuasive because as discussed in the restriction dated 02/04/09, unity of inventions is broken when the common technical feature is not "special". Further, a feed additive need not be in a feed, thus the search for the additive will not necessarily encompass the combination of the two.

The requirement is still deemed proper and is therefore made FINAL.

Claims 7-11 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected inventions, there being no allowable generic or linking claim.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Specifically, it is unclear what is inhibited by lactationonic acid salt such that the lowering in egg-laying rate is modified and therefore the functional language is indefinite.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Magariello (US 2,746,916).

Magariello teaches the process of making and isolating calcium lactobionate (col 3 lines 17-20).

MPEP 2112.01 II states:

"Products of identical chemical composition can not have mutually exclusive properties." A chemical composition and its properties are inseparable. Therefore, if the prior art teaches the identical chemical structure, the properties applicant discloses and/or claims are necessarily present. In re Spada, 911 F.2d 705, 709, 15 USPQ2d 1655, 1658 (Fed. Cir. 1990) (Applicant argued that the claimed composition was a pressure sensitive adhesive containing a tacky polymer while the product of the reference was hard and abrasion resistant. "The Board correctly found that the virtual identity of monomers and procedures sufficed to support a prima facie case of unpatentability of Spada's polymer latexes for lack of novelty.").

Here, the claim is directed to the compound, lactobionic acid or a lactobionic acid salt, which would reasonably be expected to inherently to be a compound within the

class of eggshell reinforcing agents, stress relievers, and inhibitors for lowering in egg-laying rate, as claimed by Applicant, given the same compound claimed is disclosed in the prior art.

Note, a recitation of the intended use (such as feed additive) of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it anticipates the claim. Here, the intended use is met where both the prior art and instant claims are directed only to a single compound, i.e. calcium lactobionate.

Conclusion

No claims allowed.
